

Nozzle extensions series D 13

schütze
SPRAYTECHNOLOGY

The extensions of the D13 series have a pipe diameter of 13 mm. They give the opportunity to solve application jobs by their small dimensioned construction, especially for the installation in machines or robots because of very low space requirements. Also suitable for spraying into very small moulds or through small holes.

Nozzle extension model **ahead**:

Extension spraying ahead available in version:

- roundspray
- flatspray

Extent of delivery: complete extension

Nozzle extension model **circular jet**:

Extension spraying circular jet available in version:

- radial jet (360° hollow cone)

Especially suitable for applications inside cylindrical bodies or moulds.

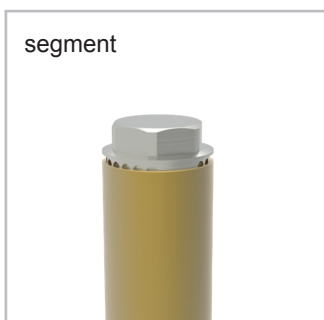

Extent of delivery: complete extension

Nozzle extension model **segment**:

- segment extensions are available with different segment areas (e.g. with 2x80° segments and 2x100° closed areas).

Extent of delivery: complete extension

They can be made in any needed length and form.

Special designs on request.
