Nozzle extensions series D 6 needle sealing

The nozzle extensions of the D6 series have a pipe diameter of 6 mm. They give the opportunity to solve application jobs by their small dimensioned construction, especially for the installation in machines or robots because of very low space requirements. Also suitable for spraying into very small moulds or through small holes.

The needle-sealing nozzle extensions have a very low amount of dead space. This means that even low-viscosity materials can be processed without the extensions running empty in an overhead position.

Nozzle extension model **angled**:

Extension spraying at an angle available in various versions:

- spraying at an angle 45°
- spraying at an angle 90°
- spraying at an angle 135°

Extent of delivery: complete extension

Nozzle extension model **ahead**:

Extension spraying ahead available in version:

- roundspray, spraying ahead

Extent of delivery: complete extension

Nozzle extension model **circular jet**:

Extension spraying circular jet available in version:

- radial jet (360° hollow cone)

Especially suitable for applications inside cylindrical bodies or moulds.

Extent of delivery: complete extension

They can be made in any needed length and form.

Special designs on request.
Technical alterations reserved.
