

## Air-Material Distributor

**schütze**  
SPRAYTECHNOLOGY

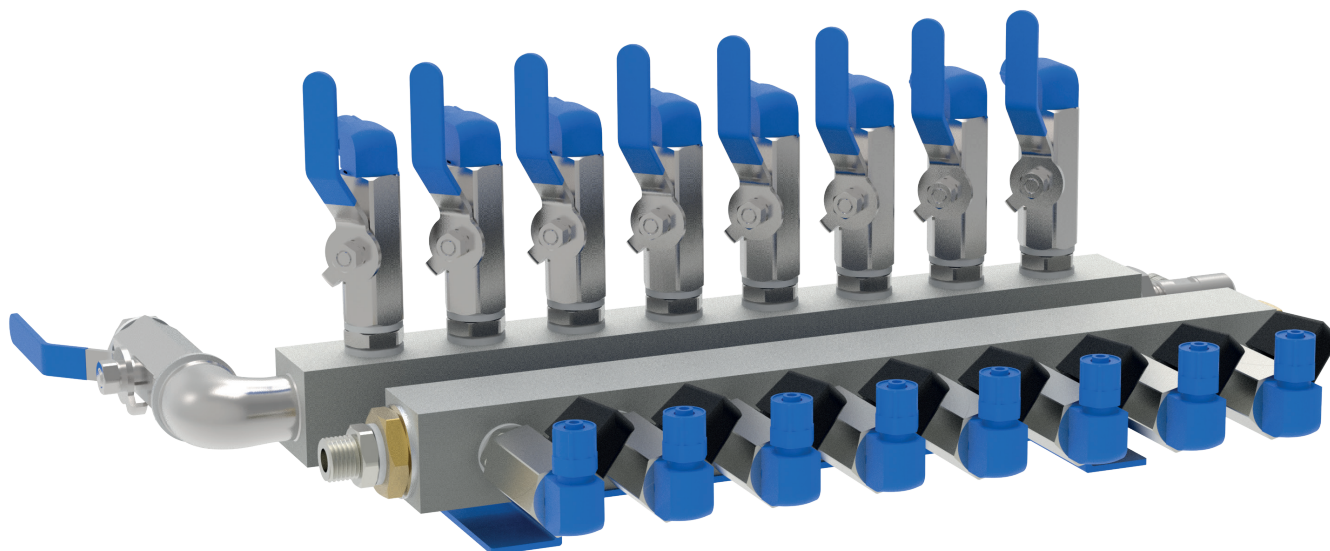

The SCHÜTZE air–material distributors are designed for the distribution of atomizing air and material (supplied from pump or pressure tank) to several spray valves or spray guns.

These distributors are manufactured from stainless steel. In this way they are suitable for most of fluids f.i. glues, adhesives, colours, paints, release agents, oils...

They can be used for pressures up to 8 bar. For higher pressures special designs available.

In standard versions they are available for 4, 6 or 8 spray valves or spray guns.

Special designs on request.  
Technical alterations reserved.
